

STOKVIS TAPES CHOSSES NORMAN NETWORK PROTECTION:
**GIVES A COMPLETE GRIP
 ON DATA SECURITY**

"We can monitor the system ourselves and we get clear signals when Norman Network Protection captures spyware and malware in our network. There have already been a number of occasions when Norman has stopped potential attackers."
 Joachim Westman, IT Manager of Stokvis Tapes.

Stokvis Tapes has a 50 year history of selling effective tape solutions. The company sells both tailor made and standard tapes to industry and to selected resellers. Manufacture and sales is now handled by 23 companies all over the world.

All these sister companies and their computer networks must be coordinated and interconnected in a complex architecture, which places very stringent requirements on the company's security solution. In total, several hundred users must be able to reach services such as the sales and business intelligence system via the network. Most of the users are internal within the sister companies, but some users are external

consultants. Stokvis Tapes therefore needs to ensure that the external consultants' data traffic is also controlled, as Joachim Westman, IT manager of Stokvis Tapes explains:

"When it comes to external people working with our company's most critical systems, such as our business intelligence system, we must be able to control them. We are talking about people who usually have

very high access rights, so if they should happen to introduce dangerous code the result could be devastating. With Norman Network Protection we now have this control," he says.

That the choice was Norman Network Protection, from the security company Norman, was natural, believes Joachim Westman. Norman Network Protection stood out among its few competitors, not least because Norman Network Protection takes significantly more protocols for analysis than any alternative can offer. Stokvis Tapes has been running Norman Network Protection for almost a year and it has worked very well right from the beginning, according to Westman. The system was installed and running in just a few hours.

Now Norman Network Protection monitors all traffic and logs who is putting which data where. It is completely self-updating and requires no administration other than an occasional inspection.

Damaging code is found and eliminated with Norman's advanced security technologies Norman SandBox® and DNA Matching. It is also possible to send code to Norman's laboratory for in-depth analysis if there should be any particular suspicion of damaging code, an opportunity that Joachim Westman has also made use of.

"It was shown that there was no danger on that occasion, but it was valuable to be able to have that confirmed."

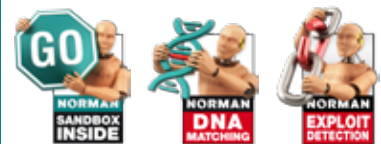

FACTS ABOUT STOKVIS TAPES

Stokvis Tapes is a leading independent adhesive tapes specialist with 20 production facilities spread across the globe. The Group is at the forefront of developments and innovative solutions in the tape Industry. The international presence allows Stokvis Tapes to offer customers a perfect combination of local presence and international expertise provided through passionate, enthusiastic, customer orientated employees. With over 50 years of experience in the adhesive industry Stokvis has built a strong reputation for solving the most demanding bonding, insulation, masking, protection, sealing, shielding and packaging applications.

ABOUT NORMAN NETWORK PROTECTION

- Central protection for all the units in a network, regardless of whether they are from an internal or external source.
- Protects both servers and clients in a network, unlike conventional authority-based solutions.
- Detects and eliminates attacks on the infrastructure from damaging code in real time.
- Simple and quick to put into operation. Connect Norman Network Protection to the LAN, start and the network is protected.
- Independent of network topology and other units.
- Can be configured between the internet and the local network. All data in the network is then protected by Norman Network Protection, which rapidly stops threats to the network.
- Uses Norman Sandbox®, Norman Exploit Detection and Norman DNA Matching.

Norman ASA is a world leading company within the field of data security, internet protection and analysis tools. Through its SandBox technology Norman offers a unique and proactive protection unlike any other competitor. While focusing on its proactive antivirus technology, the company has formed alliances which enable Norman to offer a complete range of data security services. Norman was established in 1984 and is headquartered in Norway with continental Europe, UK and US as its main markets.
